**SAFETY**  
eyewear

CLEAR SIGHT • SAFE SIGHT • ON SITE

At Lake and Valley Optical, we have the experience and knowledge to help you see clearer and safer with comfort and value. Our Certified Optical Dispensers provide prescription safety eyewear to a wide variety of organisations and workplaces. From food processing to glue manufacturing, or from a mine site to a University laboratory, we have experience in a variety of workplaces.

## ORDERING OPTIONS FOR YOUR CONVENIENCE

---

- Visit one of our practice locations for one-on-one attention from our Optical Dispensers between Monday and Saturday.
- Organise an Optical Dispenser to visit your workplace with all the samples and equipment needed to accurately dispense the eyewear. Onsite appointments available between 5.00am and 7.00pm
- Use our digital ordering system and have accurately dispensed prescription safety eyewear to anyone, anywhere in the world, simply.
- Or order online if you've had eyewear through us previously or if you have all the information required.

Make ordering simple by choosing the option, or a combination of options to suit your workplace. Let us help with a custom process to suit your needs.

## FRAME CHOICE

---

We offer you one of the largest ranges of safety frames in Australia. Most suppliers offer one manufacturer for you to choose from. With products from 4 of the largest certified manufacturers in Australia, you have over 120 frames options to select from.

## LENS CHOICE

---

There's an extensive range of lens options to compliment the individual prescription requirements and job tasks of each wearer. Your lenses will be manufactured using the latest technologies from some of the largest optical lens laboratories in Australia and Asia.

## LENS OPTIONS

---

**SV = Single Vision:** A lens with only one power and therefore one focal length. Perfect for one aspect of your visual needs, they can be suited to reading or long distance.

**BF = Bifocal:** As it suggests, it has two focal lengths. Usually, one for distance and one for near, it offers the wearer some flexibility while wearing the eyewear most of the time. Not used as readily today, but still a good option for some applications and job tasks.

**PR = Progressive:** This option provides the wearer with the most flexible choice as it includes all powers between near (bottom) and distance (top) with a progressive transitional change between them. Sometimes called multifocals or PALS this lens type is probably the most popular.

**EF = Extended Focus:** Sometimes called occupation progressives or enhanced reader, this lens is a reading lens with a twist. It offers two reading distances, usually one at 40-50cm and the other at 70-90cm. Great for the computer, workshop, control room or office.

**AF = Anti-Fatigue:** A single vision distance lens with a specific boost in the lower portion to aid with closer tasks like reading and devices.

## LENS COLOURS

---

- **Clear:** No colour, UV protection
- **Sunglass:** Two options available, polarising and dye tint (varies between manufacturers)
- **Photosensitive:** Changes colour based on exposure to UV light. Sometimes called Transitions or Sensity
